[REDACTED]

A survey indicates that a sufficient body of material (maps, statistical data and textual) of recent date is available to warrant a project on Rumania: Agricultural Regions. The study would contribute to a better understanding of this important facet of Rumanian economic geography and help to fill specific intelligence gaps as noted by M/AG re its NIS program.

The "Northern Territories" of Poland, PN 63.1720, will define the area, outline geography and indicate changes in recent years as a result of World War II destruction, population shifts, and major political changes. This work will also support a study on recent boundary adjustments along the Soviet-Polish frontier when details regarding these adjustments are available.

Hydroelectric Power Potential of Communist China, formerly planned as an article for the MR, has been reconsidered for publication as a geographic intelligence report, and project initiation for PN 61.1719 to cover has been submitted. The draft was returned from Editing for analyst review before dittoing for coordination.
